EDUCATION

University of Virginia

Bachelor of Science in Computer Science & Applied Statistics

GPA: 3.85/4.00 (CS)

Charlottesville, VA

Expected May 2028

TECHNICAL SKILLS

Languages: Python, Java, SQL, TypeScript, JavaScript, HTML/CSS, C++

Frameworks & Libraries: PyTorch, NumPy, Pandas, Flask, Django, SQLAlchemy, React

Tools: Git/GitHub, GitHub Actions, Docker, PostgreSQL, REST APIs, pytest, Unix/Linux

EXPERIENCE

Software Engineer Intern

Jun 2026 – Aug 2026

Antralio

Charlottesville, VA

- Designed and built a system (TypeScript/Node.js, PostgreSQL) that automates quarterly investment reporting for a family office's \$45M, 27-holding portfolio, calculating each holding's value and returns from source financial statements; cut reporting time from days of manual transcription to under an hour.
- Designed and deployed a production PII redaction system for a real estate client, irreversibly removing ~20 categories of PII from legal contracts; cut redaction time from 2 days to minutes, unblocked a stalled deal, and enabled Antralio to work with GDPR-regulated businesses.

Machine Learning Research Assistant

Apr 2026 – Present

UVA RAISE Lab

Charlottesville, VA

- Built simulation environments (Python) for open, cluttered, and room-layout scenarios to evaluate a multi-robot motion planner's runtime and success rate across configurations of up to 9 robots.
- Surveyed recent learning-based motion planning methods to inform the planner's design and presented findings to the lab.

Backend Software Engineer

Jan 2026 – May 2026

E2Logos

Charlottesville, VA

- Selected by a UVA CS professor to build an end-to-end rubric-based grading system (Python, PostgreSQL) for the platform his courses run on, used by 80+ students every semester; scoped features directly from student feedback and faculty requirements.
- Owned ongoing backend maintenance for the live platform and resolved 20+ defects across grading, data, and permissions.

Software Engineer Intern

May 2025 – Aug 2025

Omnicom Media Group

Singapore

- Wrote SQL queries in Meta Advanced Analytics and Google Ads Data Hub to measure campaign performance and inform ad-spend allocation for 15+ clients, replacing a weekly hand-built report with a scheduled job; 90% of the resulting recommendations were adopted.

PROJECTS

TributeFlow | Python, GitHub Actions, Google Apps Script

Jul 2026 – Present

- Worked directly with a local SPCA to launch a self-service tool that reduced a spreadsheet-to-website workflow from 2 hours of manual entry to seconds through a single click; now extending the system to consolidate donor, volunteer, marketing, and adopter records into a unified database.

SnapTrack | Python, Flask, Gemini API, PostgreSQL

Jul 2026 – Present

- Awarded \$1,000 in funding as 1 of 20 teams selected from 150 applicants to build SnapTrack, an AI-powered nutrition tracker for open-source smart glasses.
- Shipped an installable web app that turns a photo into a fully logged meal in seconds, aiming to replace the manual search-and-select entry required by conventional food trackers.
- Built the Gemini-based analysis pipeline that identifies each dish in a photo, estimates portion sizes, and returns calories and macros in 2 seconds; one-tap corrections rerun the analysis and update the results.

PUBLICATIONS

Analysis of CPI Time Series Using ARIMA Models | *International Journal of High School Research*

2024

- Applied ARIMA time-series forecasting and K-means clustering to analyze CPI behavior across economic regimes.
